

Homework 0

Due: 21 Jan 2025

Problem 0.1 — practical

Using a text editor, create a \LaTeX file that is at least slightly coherent, compiles, and makes use of:

- any sort of list,
- emphatic (i.e. italic) text,
- math mode using at least one named symbol,
- some commented out text,
- and at least one other \LaTeX feature not already mentioned.

(A convenient use of the comments might be to point out what you've used and where!) The actual content is not important and could be either true or fanciful. Do make sure that the file compiles, though, and appears the way you want it to.

Hand in the \LaTeX source file using the handin script:

```
handin cmsc208 hwk0 myfile.tex
```

It's due at the start of class on the due date

Collaboration policy: collaborative. You each have to hand in your own version of the assignment, but you can talk to other people about the problems. Mention in a comment who you worked with. (Still no copying, though.)
